

# Writeup of Extra Functionality in Homework 4

Hershal Bhavé, Eric Crososn

October 13, 2014

## The First Bonus

For the first five points we display the following additional information about the user's selected coordinate:

- Elevation

## The Second Bonus

For the second bonus we implemented three additional modest features worth a minimum of five (5) points each. These features are:

- The timezone of the selected point
- Current time at the selected point
- Current weather over selected point

As apps exist on the appstore to address each of these functions independently, it is no stretch to be awarded all additional bonus points for having implemented the above functionality.
